Hi Brian - When we talked last, your consultants were proposing to come up with a new drawing that would attempt to delineate the contaminated areas from the non-contaminated areas (i.e., the areas covered with clean fill). Unfortunately, the orange barrier fencing only separates more contaminated material from less contaminated material, except to the extent that the barriers are covered by clean fill. As EPA's map shows (attached below, drawn by CDM), contaminated material was left behind in many areas at "trace" levels, which are still regulated by Superfund.

Thanks!

See Craig's email bellow. It contains a little more information regarding where there building is located.

Thanks,

Brian

Brian,

We will see you at 11:00 AM on October 27, 2010. We share the building with another State agency so there is a common entrance on the east side of the building. We are located on the first door to your left (south side of building) there is a small reception desk outside our office doors.

Thanks,

Craig
